BRANDGUARD AI

TechCircuit Hackathon • Round 3 Final Build • Team: TECHSPARKZ

Tagline: *Create Freely. Publish Confidently.* • **Status:** Production Hardened

---

1. Executive Summary & Problem Statement

BrandGuard AI is an enterprise pre-publication governance platform that ensures organizational digital content complies strictly with approved brand guidelines, verified pricing, registered terminology, and visual standards. In Round 3 Final Hardening, BrandGuard AI was advanced into a production-grade multi-tenant platform delivering: (1) OWASP Argon2id password security with seamless transparent on-login migration from legacy hashes; (2) Organization-level multi-tenant data isolation and strict server-side authorization boundaries; and (3) OCR-based visual brand analysis with canvas text inspection, contrast validation, and resilient fallback.

2. Implemented Round 3 Hardening Improvements

IMPROVEMENT 1: ARGON2ID PASSWORD SECURITY & AUTO-MIGRATION

Migrated from salted SHA-256 to modern OWASP-recommended Argon2id (m=64MB, t=3, p=4) using argon2-cffi. Includes seamless transparent auto-migration: legacy SHA-256 accounts authenticate via constant-time comparison, automatically upgrade to Argon2id in the database upon successful login, and log a security audit event without user disruption. All newly created users receive Argon2id hashes directly. Plaintext passwords are never stored or logged.

IMPROVEMENT 2: MULTI-TENANT ORGANIZATION-LEVEL DATA ISOLATION

Introduced first-class Organization entity models with database columns across brands, approved facts, content items, visual analyses, and audit logs. The backend enforces validate_org_access across all routes: cross-organization access, reads, updates, or approvals return HTTP 403 Forbidden. Enforced strict RBAC: creators can submit content and view guidelines, but are blocked from approving submissions or modifying brand rules.

IMPROVEMENT 3: OCR-BASED VISUAL BRAND ANALYSIS & ACCESSIBILITY

Integrated Tesseract OCR text extraction engine supporting PNG, JPEG, and WebP marketing images. Extracted canvas text is checked against prohibited terminology, pricing contradictions, unapproved naming abbreviations, and absolute guarantee claims. Calculates relative luminance and WCAG 2.2 AA contrast ratios (4.5:1 threshold) between dominant colors. Provides explicit uncertainty notes and a graceful fallback mode when host environments lack Tesseract binaries.

3. Technical Architecture & Technology Stack

Component	Technology	Hardened Capability
Frontend	React 19 + TypeScript + Vite + Tailwind CSS v4	OCR canvas text inspector, multi-tenant UI, visual workbench
Backend API	Python 3.14 + FastAPI + Pydantic v2	REST endpoints, strict input validation, async review pipeline
Review Engine	Boundary Regex + Ground Truth Fact Matcher	Zero-hallucination deterministic matching + evidence citations
Visual & OCR	Pillow (PIL) + PyTesseract + WCAG 2.2 Formula	Canvas text extraction, color clusters, contrast calculations
Security / Auth	Argon2id (argon2-cffi) + PyJWT + RBAC	OWASP Argon2id hashing, on-login rehash, multi-tenant checks
Database	Local SQLite Persistence / Supabase PostgreSQL	Multi-tenant organization schemas, safe schema migrations

4. Automated Testing Verification (27 / 27 Tests Passed)

The automated test suite in backend/tests/ executes 27 comprehensive tests validating the review engine, Argon2id password security, transparent migration, multi-tenant data isolation, OCR text inspection, and WCAG contrast. **Pass rate: 100% (27 passed in 5.31s).**

Suite / Scenario	Requirement Verified	Outcome	Status
Prohibited Term ('cheap')	Flags term and suggests 'cost-effective'	Verified guideline reference returned	**PASSED**
Price Contradiction	Flags ■5,999 vs ■4,999 catalog price	Evidence record fact-novatech-001 linked	**PASSED**
Promotional Guarantee	Flags '100% guaranteed results'	Status 'insufficient_evidence' assigned	**PASSED**
Revision Preservation	Edit creates immutable Rev #2 snapshot	Snapshots preserved and retrievable	**PASSED**
Creator Unauthorized Approval	Creator attempts unauthorized approval	Server rejects with HTTP 403 Forbidden	**PASSED**
JWT Login Success & Token	Login with valid credentials	Returns valid signed JWT Bearer token	**PASSED**
Argon2id Password Hashing	Verify Argon2id parameter compliance	Hashes start with $argon2id$ (m=64MB)	**PASSED**
On-Login Password Migration	Login with legacy SHA-256 account	Automatically upgrades to Argon2id in DB	**PASSED**
New User Argon2id Storage	Admin creates new user	New user receives Argon2id hash directly	**PASSED**
Multi-Tenant Isolation (Read)	Apex admin reads NovaTech content	Server rejects with HTTP 403 Forbidden	**PASSED**
Multi-Tenant Isolation (Approve)	Apex admin approves NovaTech content	Server rejects with HTTP 403 Forbidden	**PASSED**
Creator Role Restriction	Creator edits brand guidelines	Server rejects with HTTP 403 Forbidden	**PASSED**
OCR Canvas Rule Violations	Extract prohibited words from graphic	Flags 'cheap' & 'unbreakable' in canvas	**PASSED**
WCAG 2.2 Contrast Ratio	Measure tonal contrast between colors	Black/White gives 21:1; low contrast flagged	**PASSED**
Graceful OCR Fallback	Analyze image without Tesseract binary	Graceful fallback with clear diagnostic note	**PASSED**

5. Known Limitations & Disclosure

• **Implemented in Round 3 Hardening:** Argon2id password security, on-login rehash migration, multi-tenant organization boundaries, OCR image text review, WCAG 2.2 contrast checks, and immutable audit logs.
• **Explicit Environmental Disclosure:** Optical Character Recognition via Tesseract utilizes host OS binaries; when missing, the platform transparently activates graceful fallback mode, executing deterministic color palette, contrast ratio, and resolution checks without degradation.
• **Future Enterprise Roadmap:** SAML 2.0 / Okta single sign-on integration, multi-sig approval quorum workflows, and custom localized OCR models for non-Latin typography.

6. Team Contributions (Team: TECHSPARKZ)

Team Member	Role / Responsibilities	Key Deliverables
Full-Stack Lead	Architecture & Integration	Multi-tenant scoping, FastAPI endpoints, React UI, OCR workbench view
AI / Engine Engineer	Review & OCR Engines	Canvas text extractor, brand rule violations in images, WCAG math

Security & QA Engineer	Auth, RBAC, & Automated Testing	Argon2id migration, multi-tenant boundaries, 27-scenario test suite
